

# PRE-INSTALLATION CHECKLIST

The following checklist outlines key engine condition aspects to be inspected prior to the installation of a Redline Emissions Products DPF or DOC. Any faults found should be corrected prior to installation.

- Intake air filter cleanliness, restriction & overall condition is good
- Absence of air intake system leaks including charge air cooler
- No signs of smoke from the engine exhaust upstream of the aftertreatment system
- Exhaust system integrity - including sensors, heat shields, clamps, brackets, etc.
- Absence of visual signs of engine oil, coolant or diesel fuel in exhaust system
- Absence of turbocharger oil seal leaks
- Absence of audible combustion problems
- Absence of excessive crankcase vent tube emissions (if applicable)
- Absence of engine/aftertreatment control module trouble codes, whether they are active or inactive
